#### **ABSTRACT**

This paper offers a general review of literature relating to the maintenance, development, and enhancement of Aboriginal languages in North America, particularly Canada. Drawing primarily on sociolinguistics, several concepts about language usage and change are outlined that are useful for the purposes of thinking about language maintenance. Next, the current status of Aboriginal languages in Canada is considered through census figures and other broad data, national surveys of factors that influence language change and maintenance, scales of language vitality, and comparisons with recent immigrant language groups in North America. Finally, sources are examined that outline strategies for Aboriginal language maintenance. These include sources covering language values and support for endangered languages, general guidance on language retention and renewal, general policies and program provisions in schools, descriptions of specific bilingual and native language programs, teachers and their training, research and evaluation, development of instructional materials, literacy in Aboriginal languages, orthography development, Aboriginal language development in family and community settings, and Aboriginal language maintenance in other countries. Contains 80 references. (SV)

and many others are often thought to contribute to the shift from one language to another, but generalizations about the effects of such factors to another is more common than long-term maintenance of two languages depending on social conditions, attitudes, and values in the situation (Bratt Paulston 1986, p. 121, 124). Factors such as marriage between people from the two groups, geographic moves of speakers (especially away from isolated communities), small numbers of speakers of one language, general domination of one group by another. most widespread and most stable, raises its children with two mother tongues." It is through the bilingualism of individuals and their changes in behavior that languages as a whole change. Shift from one language As a result, no society, not even those whose bilingualism has been in one community over time, but she says that "Maintained group language may be formed. Bratt Paulston (1986, pp.123-125) gives three examples of types of situations in which two languages are maintained bilingualism is unusual" (p. 121). According to Fishman (1976, p. 110), "No society needs or has two languages for the same functions. ıs risky (Fıshman, 1976, pp. 121-140, 179).

may rexist borrowings (e.g., Basso (1967) on Apache). Indian English, that is, forms of English produced by Aboriginal/English contact, Some languages may be eroded slowly by another through borrowing of vocabulary and grammatical deterioration (e.g., Mailhot (1985) on Montagnais; Miller (1971) on Shoshoni). However, some languages shows a kind of shift in English (e.g., Nelson-Barber, 1982; Miller, but the language itself may change as well, for example in its sound system, vocabulary, and/or grammar (Weinreich, 1968). One possibility Inclividuals' language behavior and use of a language may change. is the formation of a new language, like Michif from French and Cree. 1982; Fleischer, 1982; Leap, 1982b; Darnell, 1993).

expect highly polarized rhetoric, and contradictions between rhetoric and actual behavior in the language communities in question. Skutnabb-Kangas (1986) casts doubt on interpretations of research data on minority education because of researchers' polarized views on the people associated with the languages in question tend to take passionate attitudes to them (Bratt Paulston, 1986, p. 120). Therefore, one can Finally, it should be noted that when languages are in the process of shifting, especially if one language looks as if it will not survive,

## Levels of Aboriginal Language Maintenance

#### Numbers of Speakers

A general sense of the degree to which Aborignal languages are being maintained in North America can be gleaned from numbers collected through national censuses and surveys. Up to the 1980s, numbers of speakers of individual Aboriginal languages in North America had only been calculated on the basis of linguists' estimates (e.g., Chafe, 1965; Foster, 1982). Since 1981, the Canadian census has cate gorized individual Aboriginal languages separately rather than under the two previous headings of Amerindian and Inuit. An analysis of the 1981 census data by Burnaby and Beaujot (1986) showed that a number of Canada's approximately 60 Aboriginal languages probably had as few as 100 speakers, and that only Cree, Ojibwa, and Inuktitut had more than 10,000 speakers. The most shocking comparison was the luxionical percentages of Aboriginal people who had an Aboriginal language as their mother tongue. In 1951 it was 87.4 per cent, but in 1981 it was just 29.3 per cent.

In 1991, Statistics Canada (1993) conducted a special national survey of Aboriginal peoples in which detailed language questions were asked. It indicated that 36 per cent of adults surveyed (over age 15) and 21 per cent of children spoke an Aboriginal language. Fifty-one percent of adults and 71 per cent of children reported never having spoken an Aboriginal language (Table 2.1).

and analysis issues as well as the fact that they report on what people think about their own and others language use rather than on direct and systematic observation of language in use. However, while the 1991 Statistics Canada, the AFN, and the Saskatchewan surveys Data from censuses and surveys are problematic because of sampling Saskatchewan Indian Cultural Centre conducted a door-to-door sociolinguistic survey of 20 selected communities with significant Linguages in only three of the communities to be in good health. The Aboriginal populations in Saskatchewan. It showed the Aboriginal collected data on language use and resources as well as speaker fluency. locations to be fluent speakers of an Aboriginal language. Individual languages were ranked on a state of health' scale. In 1988-89, the Saskatchewan Indigenous Languages Committee (1991) and the results of a language survey it conducted by getting estimates from community leaders on a rationalized sample of First Nations (in effect, Indian reserves). It showed 48 per cent of the individuals in these In 1990, the Assembly of First Nations (AFN) published the

<sup>1</sup>See Krauss in this monograph for a discussion of the state of denial that some groups are with regard to the immanent demise of their native language.

C1

#### Stabilizing Indigenous Languages

numerical results of all these studies were somewhat inconsistent, the trends concerning language maintenance and loss were similar.

## National Surveys of Language Maintenance

What kinds of factors seem to influence the loss or maintenance of Aboriginal languages? Findings from the Burnaby and Beaujot (1986) study of census figures indicate the greatest maintenance of Aboriginal language "among people who live in isolated, small communities and who tend not to change their place of residence. Historical length of west or north-south location does not seem to be as strong a factor; for example, Nova Scotia shows higher Aboriginal language maintenance than the Yukon" (p. x). Higher Aboriginal language use is related to lower education, those not in the labor force, and those with lowest incomes. Also, women show less Aboriginal language maintenance than men (pp. x-xi). The AFN (1990) survey suggests that Aboriginal languages are most maintained in isolated communities and those with larger populations. Communities close to urban centers and small rural communities had the lowest Aboriginal language retention.

In terms of language maintenance efforts, these figures are important in indicating priorities for maintenance action (e.g., first or second language emphasis) in individual communities and areas. Given the overwhelming shift towards English (and towards French in parts of Quebec), it seems imperative to work hard even on Cree, Inuktitut, and Ojibwa, since it seems that all Aboriginal languages are at risk.

## Scales of Aboriginal Language Vitality

changing contexts, and the role of Aboriginal literacy in the of speakers, functions of Aboriginal languages and English in the community, indicators of adaptability of the Aboriginal language to community. Conducting a survey to include all these factors adds use in classifying the health of Aboriginal languages in surveys such as the AFN and Saskatchewan surveys described above. In order to apply such scales, one needs not only numbers of speakers, but also the age obsolescing, obsolete, or dead. Each level has characteristics relating to themselves in various settings, and how many native speakers there are left. Bauman (1980) created a five level scale describing languages as flourishing, enduring, declining, obsolescing, and extinct. He added factors such as literacy in the Aboriginal language, and the adaptability of the language to new conditions. Bauman's scale has been adapted for has prompted linguists to develop scales indicating the vitality of languages. Wick Miller (1977, classified languages as flourishing, whether the children learn the language, what adults speak among The fact that many North American Aboriginal languages have declined significantly and that some have become extinct in this century

considerably to the complexity and expense of the data collection and

## Maintenance of Languages Compared

immigrant groups stop using their ancestral languages after two or three populations as being in a relationship with the majority society of still speakers of most of the original Abortginal North American languages is impressive testimony to their ability to survive. Most generations despite the fact that many are supported by incoming immigrants. Bratt Paulston (1981, p. 476), using a model based on Schermerhorn (1970), accounts for this by describing Aboriginal groups other than English, French, or Spanish speaking. That there are tained their languages to a greater extent than any of the immigrant It is clear that Aboriginal groups in North America have main-Torced assimilation with resistance" which tends toward conflict.

maintenance, formal European-style education, and literacy in English and their minority languages until the late 1800s or even well into the 1900). Walker (1981), using literacy as a focus, gives a sense of how the power balance between the Anglo majority and areas Aboriginal Leap (1981) and Wardhaugh (1983) provide detailed descriptions of the history of U.S. and Canadian Aboriginal languages (respectively) in relation to the contemporary development of other languages. According to logic and various historical accounts, the Aboriginal populations and the newcomers with whom they shared the continent were not greatly different with respect to the dynamics of non-English language groups might have changed during the past 150 years or so.

# Active Strategies for Aboriginal Language Maintenance

## Values and Support for Endangered Languages

mother-tengue continuity." The extent to which forces (e.g., economic) pointing out that there are always other considerations than the personal] functions first, and, if possible, go on from there, slowly building outward from the primary [e.g., home] to the secondary [e.g., community and perhaps workplace] institutions of intergenerational in the majority society conflict with this priority is important. By mmority language issues at hand, Fishman puts his finger on the endangered languages must assure the intimate vernacular [home and Fishman (1989, p. 401) says that "Language policy on behalf of inherent tensions in inmority language maintenance situations.

people think that the maintenance of Aboriginal languages is central to However, there are also indications that people in Aboriginal communities are form or ambivalent about the value of Aboriginal There are a number of sources which indicate that many Aboriginal the expression of Aboriginal cultures (e.g., Cassidy, 1992, pp. 10-11).

#### Stabilizing Indigenous Languages

language maintenance programs (e.g., Saskatchewan Indigenous Languages Committee, 1991, pp. 156, 186; Assembly of First Nations, 1990, p. 27; Shkilnyk, 1986, pp. 45, 77; Leap, 1981, p. 38). Policies and attitudes in the majority society have actively repressed Aboriginal languages or at least have made adults feel that their language is at best useless or at worst a deterrent to education and employment. The creation of a sense that there is a one-to-one tradeoff between English and the Aboriginal languages is greatly problematic.

## Three Texts on Aboriginal Language Renewal

specific examples of issues and solutions that have come up in various talks about contradictions in policies, and stresses the need for basic language research, functional writing systems, staff training, teaching materials, and evaluation. The St. Clair and Leap book provides context actual Aboriginal language programs. All three of these texts point out that each program is unique to its setting and should be designed to fit language study even in situations where the language is dying (see also and the essential role of community in creating and implementing policies. Leap describes various kinds of Aboriginal language programs, American Indian tribes: Issues and problems (1982). Bauman's book includes his scale of language vitality mertioned above. He also stresses having realistic goals, the self-esteem value of Aboriginal Dorian, 1987), the need for parents to speak the language to children, retention in the U.S. They are Bauman's A guide to issues in Indian language retention (1980), Leap's "American Indian languages" chapter in Ferguson and Brice Heath's Language in the U.S.A. (1981) and St. Clair and Leap's collection of articles, Language renewal among Three texts have provided general guidance on Aboriginal language ts context.

## Aboriginal Language Renewal and Schooling General Policies and Program Provisions

permits us a view of how Aberiginal languages are treated generally in many different countries. Compared with established minorities' (e.g., Acadian French in the U.S. or Welsh in Great Britain), or 'new minorities' (e.g., immigrant groups in North America), 'indigenous peoples' (e.g., Samit in northern Europe, Australian Aboriginal peoples, Maoris and Pacific Islanders in New Zealand, Native Americans, and others) come out very low in the six level scale Churchill developed on problem definition in educational policy for Explicit initiatives for Aboriginal language maintenance and renewal end up in scheols more often than in any other place. From an international perspective, Churchill's (1986) study of educational policies for linguistic and cultural minorities in the 25 countries in the Organization for Economic Co-operation and Development (OECD)

incorporating Churchill's six point scale, fleshes out the scale on the dimension of racial injustice issues in educational programs for advocates community control of language and educational policies. Burnaby (1980) and Tschantz (1980) describe historical policy Aboriginal peoples and others in a number of countries. He strongly areas of taboo" in public policy discussion. Corson (1992), 164). In another paper based on the same data, Churchill (1987) sees issues of indigenous groups, along with race, religion, and sex, as placing emphasis on their own role in defining their own needs" (p. poorly dealt with in all jurisdictions" (p. 153). He continues "The problems of indigenous peoples stand out as the most intractable faced by education today. Priority should be given to the study of their needs, linguistic and cultural minorities. He says "the analysis concluded that the particular problems of indigenous peoples are among those most development relevant to Aboriginal languages in Canada.

language (mostly Inukitiut in the Northwest Territories) as language of it by grade eight. Only four per cent of the sample used an Aboriginal higher levels in reserve schools and lower in provincial schools Reserve schools tended to start Aboriginal language teaching as early as pre-school, and the general tendency in all schools was to stop teaching by the Canadian Education Association using a sample of all reserve Overall, about one-third reported teaching an Aboriginal language, with depending largely on proportions of Aboriginal students in the school. schools and about 500 provincial schools (Kirkness & Bowman, 1992). Two recent studies provide an overall picture of the numbers and characteristics of Aboriginal language programs in schools in Canada. The most comprehensive is a survey on Aboriginal education in general

was doing the worst had language programs (p. 35). The report also states that "Where Aboriginal language is the primary language of than maintenance of the mother tongue" (p. 33). Finally, from a instruction the goal is one of transition to the official language rather 80 per cent of communities in which the Aboriginal language was Ilourishing or enduring had Aboriginal language school programs, but only about 20 per cent of those communities in which the language teaching, for the involvement of elders, for the goal to be real fluency. and for more materials and better trained instructors (pp. 35-37). About communities. In addition to school statistics, comparable to those of such as the wish to have the Aboriginal language taught through secondary school, for the language to have the same standing and accreditation in the school as French, for better and more traditional teaching methods, for integration with other Aboriginal cultural Kirkness and Bowman, it included reports of community viewpoints The second survey was the AFN Aboriginal language survey (1990) mentioned above. It related only to reserve schools and instruction (pp. 43-44).

#### Stabilizing Indigenous Languages

communities surveyed effectively negates efforts of language personnel" flourishing Aboriginal languages (p.33). Also, the report concludes that "The fact that [Aboriginal] languages are not used in most of the question about where in the community the Aboriginal language was anguage was used the least, even in those communities tuat had used, it was found that the school was the place the Aboriginal

development if most programs are for the youngest children, only for a few years, inadequately funded, and if even bilingual programs are seen to be transitional to fluency in the majority language. Although there are many more programs available now than in 1980, the current survey data would give the same impression as Clarke and MacKenzie (1980a) got in their survey of Aboriginal language programs in 1980, namely that Aboriginal language programs give only lip service to pluralist programming in schools for Aboriginal children, but the patterns of provision reinforce Churchill's (1986) findings that policies for indigenous groups are largely at the lower levels of his scale of policy In sum, there is a lot of activity in Aboriginal language approaches and that they are assimilationist in intent.

#### Descriptions of Specific Programs

62), and Battiste regarding Micmac (1987). Fredeen (1988) outlines a English in the schools. Programs using an Aboriginal language as medium of instruction for children who do not speak it (immersion programs) are discussed by Shkilnyk regarding Mohawk (1986, pp. 61-Ontario) medium programs are given by Drapeau (1983) and Faries (1989, 1991) respectively. Burnaby, Nichols, and Toohey (1980) discuss survey results from Cree and Ojibwa speaking communities in Ontario with recommendations on both Aboriginal languages and Theoretical frameworks for Montagnais (in Quebec) and Cree (in great deal of information on Aboriginal language activities in schools and communities across Canada. Regarding programs specifically for children who come to school speaking an Aboriginal language, Rosier and Holm (1980) report on a Navajo medium program, Stairs (1985, surveyed Aboriginal language programs in British Columbia, Howard (1983) in the Northwest Territories, and Shkilnyk (1986) provides a 988a) on ones in Inuktitut, and Kirkness (1976) on Cree programs. Phillips (1985) discussed educational programs policies and funding for the Canadian provinces (but not territories) in a study more widely focused on Aboriginal language retention. Csapo and Clarke (n.d.) A moderate amount of documentation exists on Aboriginal language programs in schools in individual communities and regions. model for Cree immersion in Saskatchewan.

28

ر ت

#### Teachers and Their Training

The AFN 1990 survey discussed the planning and resources context for Aboriginal language programs in schools on reserves, and noted lack of funding, trained instructors, and curriculum and materials as the greatest problems (p. 22). Paynter and Sanderson (1991) show how provincial educational authorities can work with Aboriginal organizations in training Aboriginal language teachers. Stairs (1988b) discusses complex issues surrounding training and support for Aboriginal teachers who will work in schools which aim to attend to both mainstream and Aboriginal values and language. Comprehensive surveys of Aboriginal teacher education were conducted by More (1980), who was generally optimistic, and Clarke and MacKenzie (1980b), who were more pessimistic about the results. Implications for Aboriginal language teacher training appear in many of the articles in Burnaby (1985).

#### Research. Materials, and Evaluation

Lickers (1988) gives the steps necessary to ground Aboriginal language program policy in the necessary research. Bauman (1980, p. 46) and Leap (1981, p. 143) discuss background research and development that are necessary as a basis for Aboriginal language materials. It was emphasized in the AFN 1990 survey report (p. 26) that Aboriginal language teachers, who usually cannot network among themselves, have a create most of their materials themselves and are therefore always stressed for resources. A few examples of Aboriginal language materials development strategies are: using fluent speakers to create reading materials for a school program (Mitchell 1985); using local leadership to mobilize community resource people to help with an Aboriginal language immersion program (Shkilnyk, 1986, p. 61); and uncorporating culturally appropriate behaviors into materials and teaching strategies for Aboriginal children (Leavitt, 1991; Stairs, 1991).

With respect to Aboriginal program evaluation, More (1984) and Hebert (1987) emphasize, among other things, the need for special methodologies and sensitivity to the goals and contexts of the community. Ahenakew (1988) and Leap (1981) specifically discuss the importance of evaluation in Aboriginal language education. As for evaluation of individual student progress in Aboriginal language programs, Manuel-Dupont (1987) gives a thorough review of language assessment literature in general and to contextual issues in Aboriginal education but does not mention measures that would be required if the children's Aboriginal language proficiency were to be evaluated. Bauman (1980, p. 45), on the other hand, gives general guidance for student assessment in the Aboriginal language.

#### Stabilizing Indigenous Languages

#### Literacy in Aboriginal Languages

A writing system of some sort has been developed for virtually all Aboriginal languages in North America, but most only in the past century or so. Walker (1981) provides an overview of such systems with an emphasis on those that were created or widely adopted by Aboriginal groups. Burnaby and MacKenzie (1985) and Shearwood (1987) describe Aboriginal and mainstream languages used in Aboriginal community contexts. Zaharlick (1982) points out that there is controversy in some Aboriginal communities concerning whether the Aboriginal language should be written at all, as well as whether Aboriginal languages should be used in schools. She notes that proponents of writing in Aboriginal languages see one of its values to be the preservation of the languages (p. 44).

The AFN's 1990 survey on Aboriginal languages, based on estimates by community leaders and from only a sample of communities, reports seven percent Aboriginal language literates among the total population surveyed with about 38 per cent literacy among fluent speakers of Aboriginal languages (p. 21). Seventy per cert of the communities surveyed said that they had access to a writing system; seven per cent said that they did not know whether they did or not. The 1991 national survey (Statistics Canada, 1993, Fable 2.1) found that 36 per cent of adults fluent in an Aboriginal language were literate in that language. Adult Inuktitut speakers were reported as over 90 per cent literate, while speakers of other languages showed much lower levels. Data on types of media used, writing as well as reading literacy, and who taught the skills was provided.

implementation of Aboriginal language orthographics in Canada development of their languages, including orthographies (MacKenzie in the current climate of local control over language resources and their Academic literature contains many discussions on the technical aspects of orthography development for Aboriginal languages. Bauman (1980, p. 46) points out that many such academic writing systems are not practical for community use. A collection of articles on the (Burnaby 1985) covers a wide range of issues on making writing systems really useful in Aboriginal communities. Most training programs for Aboriginal language teachers in Canada have a strong component in them on literacy for the language teachers (Hilbert & Hess, 1982). In Quebec, there was for a number of years a program that and research skills so that they could work on field research and 1985; Shkilnyk, 1986, pp. 64-65). Leap (1982a) provides a helpful insight on the role of non-Aboriginal linguists and other professionals trained fluent speakers of Aboriginal languages in literacy, education, development.

In an atmosphere of growing concern in Canada about literacy levels in English and French in the general population, a number of

studies commissioned by the Canadian federal and provincial governments on Aboriginal literacy' have dealt only with literacy in English and French among Aboriginal peoples (e.g., Rodriguez & Sawyer, 1990). The Standing Committee on Aboriginal Affairs of the House of Commons (1990) has issued a report on Aboriginal literacy that addresses Aboriginal language (but not literacy) and culture as one thing and literacy in English and French among Aboriginal peoples as another with some tenuous connections between them. This kind of stance needs to be counteracted in policy development.

# Other Areas of Aboriginal Language Development

communities (pp. 33-34). The Statistics Canada survey (1993) shows and access to health, social or legal services in Aboriginal languages development activities designed for the levels of fluency in different levels of fluency were those with the most Aboriginal language services (e.g., newspapers, radio/television, community meetings, government publications, and in the justice system)( p. 33). The AFN made recommendations about community and school Aboriginal language similar data on print and electronic media use, language use at work. community, it is clear that those communities which had the highest community meetings, and the justice system (p. 21). When the results were broken down by level of fluency in the Aboriginal language in the under the heading of education, but others outside of schools remain to be considered. The AFN 1990 survey collected information about language used in the sample communities in everyday conversation, cultural ceremonies, churches, radio and television, government reports, A broad spectrum of Aboriginal language activities has been noted (Table 2.1)

Further research and discussion of Aboriginal language development outside of school contexts appear in White (1983, 1984) on activities in the Walpole Island community, and Burnaby (1984) on a broad range of Aboriginal language undertakings and resources in Ontario Finally, returning to the family as a central institution in language maintenance, Upper and McKay (1987) provide rare data on the language sevelopment of a child growing up in an Oji-Cree speaking family.

# Aboriginal Language Maintenance in Other Countries

The report on the AFN survey (1990) included a brief literature review about Aboriginal language developments in the U.S., Australia, and New Zealand (pp. 6-9). Beyond broad descriptions of policies and programs, it is difficult to work out what might be comparable and what might not between these countries and Canada. The clearest point is, that Australia has lost a much higher proportion of its original

#### Stabilizing Indigenous Languages

Samı, and Australian Aborigines. Identity and self-determination are more in focus than language, but the background history and social their inception in 1982. Finally, Jordan (1988) has written a complex description of educational policies for Canadian Aboriginal peoples, the and Micronesia. He notes the colonial influence of both France and Gr · Britain in the area. New Zealand differs somewhat from the others in ... at least token recognition of Maori has been made. In a 1986 article, he describes the rapid development of the Kohanga Reo since Kohanga Reo ('language nests' or community language preschools) in New Zealand (p. 14) and suggests that Canada study that approach (p.44). Benton (1978, 1981) provided a detailed description of language education for indigenous peoples in Australia, New Zealand, Polynesia, States is quite poor, just as it is in Canada" (p. 17). He is more enthusiastic, however, about the language and cultural potential of the n New Zealand, Australia, and the United States. He concludes that the and that "the actual operation of Indian education systems in the United Aboriginal languages than Canada has. MacPherson (1991), in reviewing Aboriginal education in Canada from an administrative and egislative perspective, also did a quick review of comparable experience situation for Australian Aboriginal peoples is "truly abysmal" (p. 15) struggles are important for comparing the three groups of people.

#### Conclusions

development, teacher training and the training of other relevant language resource per ple, curriculum development that really reflects the interests language research, language resource development, teaching materials needs to be done for each of Canada's Aboriginal languages in terms of many strongly valued priorities. The consolation is that, if programs culture, and particularly policy makers, is essential in making Aboriginal language policies work. Fighting institutionalized discrimination requires a major, directed effort. Firally, a lot of work there is a considerable difference of opinion on important matters in many Aboriginal communities to say nothing of the complexity of bureaucratic jurisdiction for Aboriginal education. Secondly, there is always a complex of issues to be resolved in Aboriginal communities, the maintenance of the Aboriginal language perhaps being only one of for Aboriginal language maintenance fail, other important goals may still be achieved through the effort. Third, the support of the majority arise from the positions taken in the material reviewed. One is that, no matter what the circumstances, the Aboriginal community must be the central decision maker in any initiative on Aboriginal language maintenance. This requirement is challenging given that it appears that here, drawing conclusions is not easy. However, four points seem to In light of the complexity of information so briefly reported on

--

community activities that support the use of the language, and other roles for school officials and academics to play in this process, but of the community, orthography development and implementation, endeavors. If the community is willing to include them, there are useful community control is paramount.
